

Dear Dr. Friedman,

I support the FDA's effort to fully implement the Dietary Supplement Health and Education Act (DSHEA) as intended by Congress. FDA's proposed rulemaking on structure/function claims, 21CFR Part 101/Docket #98N-0044, however, is totally unacceptable to me as an American consumer of dietary supplements.

In order to promote a vigorous flow of valuable health information in the marketplace, I believe it is extremely important to preserve Section 6 of DSHEA.

I do not want FDA to limit my access to scientific information about dietary supplements and health.

I do not want FDA to redefine disease, thereby restricting my ability to pursue preventive care and wellness.

Signed

*Debra Sweet*
